## Innovative and Mesmerizing

Originally designed by two German Engineers as a way to provide an efficient burning method and minimize pollution in third world countries, the Twinfire® has a life of its own as a remarkable, hand-made woodburning product that more than exceeds industry standards.

It comes in four models: Basic, Classic, Elegance, and Pur. All Twinfire models utilize the unique double-chamber combustion system for effective (93% efficient), environmentally friendly wood burning capacity and are EPA certified and approved to UL/ULC standards (tested by Omni-Test Labs—refer to logos at right).

Along with the patented burning technology of xeoos Twinfire®, it exhibits captivating flame patterns that dance poetically to provide an evening of visual pleasure and entertainment.

The Basic (shown on front cover) is available in silver, black or stainless steel with optional color steel sides (ruby, copper, bronze). It measures **48" high, 18" wide, and 16" deep.**

The impressive Classic (shown above) has a stainless steel door with lava stone cladding. Optional top plates in silver or black, or sides in trachite stone. **52" high, 22" wide, 16" deep.**

## Green and Clean

Designed with the environment in mind, the Twinfire with its unique double-chambered firebox and sleek lines is the stove of the future. Add this remarkable stove to a living space as an efficient, green alternative. Truly, it is a fascination and joy to own and operate.

The chic Elegance (shown above) is available in black glass sides with a stainless steel door, or optionally all in stainless steel, with lava or trachite stone top plates, and with base and handle choices in natural or dark brown wood. It measures 50" high, 19" wide, and 16" deep.

The exotic Pur (shown on back cover) with its futuristic look comes with black glass and aluminum side panels, and a lava stone top plate (or optional silver or black steel). It measures 51" high, 19" wide, and 16" deep.

Manufactured in Germany, the xeeos Twinfire® utilizes high quality materials. Special attention to details such as the thermally decoupled silicone handle, the uniquely shaped grate, and the optional lower steel gate have created an award winning product (see prestigious awards at right).

| Elegance (E) and Pur (P) Specifications |                                           |                |                |
|-----------------------------------------|-------------------------------------------|----------------|----------------|
| Heat Output:                            |                                           | Dimensions:    |                |
| Maximum                                 | 12 kW - 41 kBTU                           | Height (E)     | 127 cm - 50 in |
| Peak Efficiency                         | 93 %                                      | Height (P)     | 129 cm - 51 in |
| Capacity - up to                        | 100 m <sup>2</sup> - 1076 ft <sup>2</sup> | Width (E)      | 48 cm - 19 in  |
| Emission Rate                           | 2.4 gm/hr                                 | Width (P)      | 48 cm - 19 in  |
